Working Session Exercise – “Build the Matchmaker Algo and Dashboard MVP”

1. Goal

Design and build an internal tool MVP — a simple Matchmaker Dashboard and algorithm that helps the TDC team manage customers, view profiles, and assign matches.

This is a real use case we’re scaling, and your work here could directly impact the product roadmap.

2. Problem Statement

TDC matchmakers manage a growing list of clients. Each client is in a different stage of their matchmaking journey, and matchmakers need an easy way to:

1. View verified profiles
2. Track where each customer is in the journey
3. Assign potential matches
4. Record quick notes from meetings or calls

Please research dating and matrimonial apps before starting the project.

3. What to Build

Section	Details
Login	Basic matchmaker login screen (username/password).
Dashboard - Customer List	Display all customers assigned to the matchmaker. ● Show key information: Name, Age, City, Marital Status, Status Tag. ● Clicking a customer should open their detailed matchmaking view.
Customer Detailed	Show full biodata for each customer with the following fields:

View	• First Name, Last Name • Gender • Date of Birth • Country, City • Height • Email, Phone Number • Undergraduate College, Degree • Income • Current Company, Designation • Marital Status • Languages Known • Siblings • Caste, Religion • Want Kids (Yes/No/Maybe) • Open to Relocate (Yes/No/Maybe) • Open to Pets (Yes/No/Maybe) Do your research on what other field might be relevant in Indian Matchmaking space.
Dummy Profiles	Load a list of at least 100 dummy profiles of the opposite gender to simulate a matchmaking pool.
Matching Logic (Gender-specif ic)	For male customers: • Match with women who are younger, earn less, shorter, and have matching views on children For female customers: • Use thoughtful logic such as compatibility on profession, values, relocation preferences, etc. • Do your research on dating and matrimonial apps.
AI Usage (Mandatory)	Use AI to enhance the experience in at least one of the following ways: • Score/rank matches with explanations (e.g. “High Potential Match” based on logic) • Use OpenAI to generate short, personalized intros for emails • LLM-based rule engine or natural language reasoning for profile fit
Match Action	Each suggested match should have a “Send Match” button: • Trigger mock email (or show modal/toast) • Include basic profile info of the suggested match
Tech Stack (Flexible)	Frontend: React / Next.js / Vue Backend: Node.js / Firebase / Express AI: OpenAI API / LLMs / similarity logic Data: Static JSON, Firebase, mock DB Hosting: Vercel / Netlify / Render
Deliverables	• Live hosted link (Very important) • GitHub repo • Sample login credentials • 2-3 paragraph write-up explaining: -Tech choices - Matching logic - How AI is used - Assumptions made
Evaluation Criteria	UI/UX: Clean, intuitive, emotionally aligned Matching Logic: Realistic, scalable, gender-specific AI Integration: Smart, contextual, value-adding Code Quality: Modular, readable, well-commented

Ownership	Completeness, initiative, extra effort

Submission Guidelines

Send your assignment to **tech@thedatecrew.com** with the deliverables mentioned above.

Subject Line: Full Stack Developer Internship – [Your Name] – Assignment

Timeline : 2 days from receiving the assessment.
